Decision Models: Downloadable Weights and Image Support

Extended edition of the original PDF. The original two tables are preserved as two tables and extended with D3 and newer models. “NOT FOUND” means the reviewed sources did not establish that claim; it does not prove the capability is impossible. Weight availability, modality support, and device/NPU support are separate properties.

1. Models with downloadable weights confirmed

Original entries retained; D3 and newer model families appended to this same table.

Recommended small candidates: D3-Edge (~0.6B), Liquid AI d1-omni-600M (~0.6B), and D3-Lite (~0.8–0.9B). These are candidates to evaluate, not confirmed mobile-NPU deployments. D3's documented vLLM path is GPU-oriented; model weight availability does not establish ONNX, Core ML, MLX, Android, or NPU compatibility.
